Dear Sir:

The Novak Company, in its effort to help reduce the staggering costs of material handling in industry, has spent almost three decades in the development and refinement of message conveyor systems.

A comprehensive study into the price American industry is paying for materials handling, indicates that 22% of the total annual payroll in labor costs is for the handling of materials. Quick to recognize this, the Novak Company started out over twenty-five years ago to do its part in reducing handling costs. So successful were their efforts that many original installations are still in operation today.

Modern Novak Multilane conveyors feature single lane construction so that lanes may be added or removed at any time, increasing the conveyor's flexibility. The narrow type conveyor used in many brokerage houses and by major airlines throughout the country is a product of Novak development.

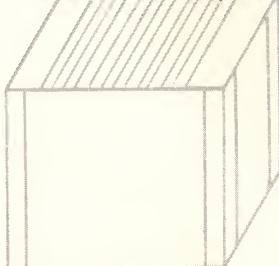

Ninety-degree turns, the Achilles' Heel of other conveyors, are made effortless and trouble free with the Novak power turn system.

Through constant research, the Novak Company has endeavored to make the best possible equipment at the lowest cost. Today, Novak's line of extruded anodized aluminum conveyors are by far the best designed, most flexible full feature units on the market. They are unconditionally guaranteed for one year providing the conveyor is serviced by the Novak Company or an approved service agency.

You can be sure of full cooperation of everyone at Novak from the designing to the prompt installation of your Multilane conveyor.

Our Engineering Department is always available to assist you with your specific paper handling problem.

You Can't Buy a Better Conveyor Than A Novak Multilane.

Save money—time—space and labor with the all-new Multilane message conveyor. This new conception in paper handling is as easily installed as putting up sectional office partitions.

Wasteful steps from desk to desk or throughout various departments are completely eliminated with the Multilane conveyor—and it can be laid out to any angle left or right, or straight ahead.

Corners are power driven—a feature found only on the Multilane. The number of channels is flexible. Starting with one, other channels may be added to suit as many stations as you may wish to serve. Also, several channel depths are available to conform to the job requirement.

Multilane conveyors are used exclusively to carry and distribute written messages, papers, documents and cards to and from designated points or stations. The advantages of the Multilane conveyor as compared with the flat belt type are: higher speeds, less space requirement, safety and simplicity.

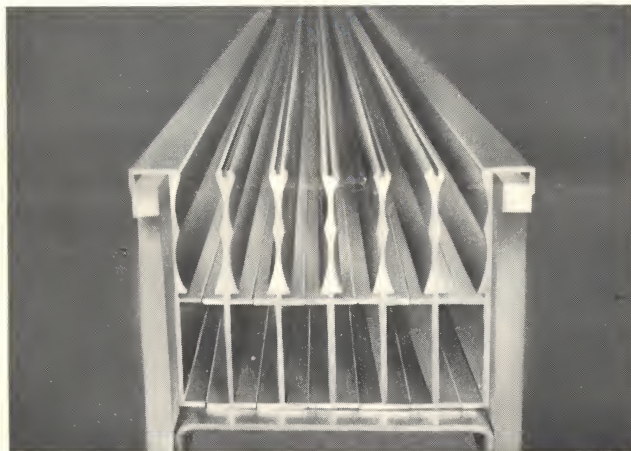

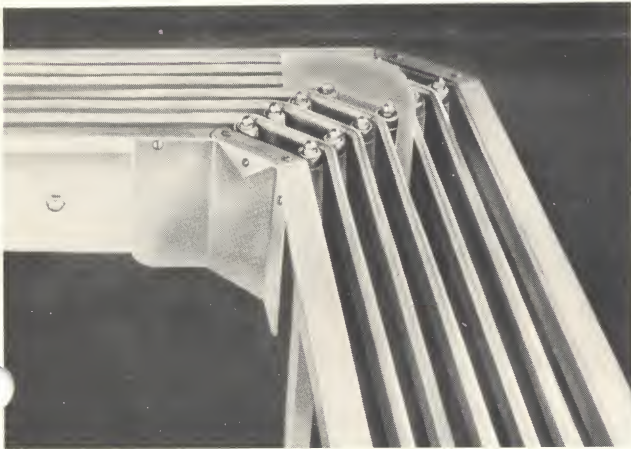

Multilane conveyors may be inclined for overhead work. The sides of the conveyor are formed of heavy gauge anodized extruded aluminum and are securely keyed together. Supports can be furnished for floor, wall or table mounting or ceiling suspension.

Novak also manufactures and installs a full line of overhead Sandwich and Drag type conveyors which may be used independently or in conjunction with the Multilane conveyors. These units may be used vertically for interfloor service or horizontally for crossing aisle areas. All models are assured quiet operation through the use of metal rollers equipped with ball bearings.

Lightweight rubber-filled canvas belting, proven most serviceable for paper handling, is used throughout.

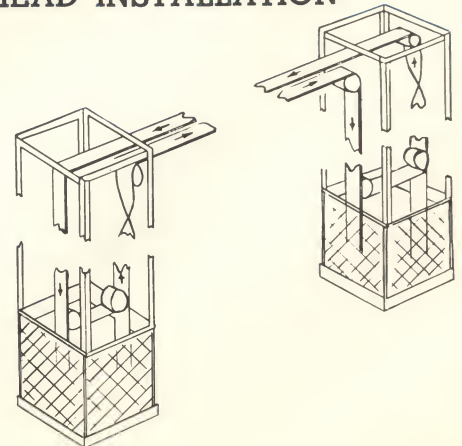

Send today for more information on Multilane conveyors similar to those adopted by the major Airlines, Department Stores, Brokers, Banks and Telegraph Companies throughout the World.

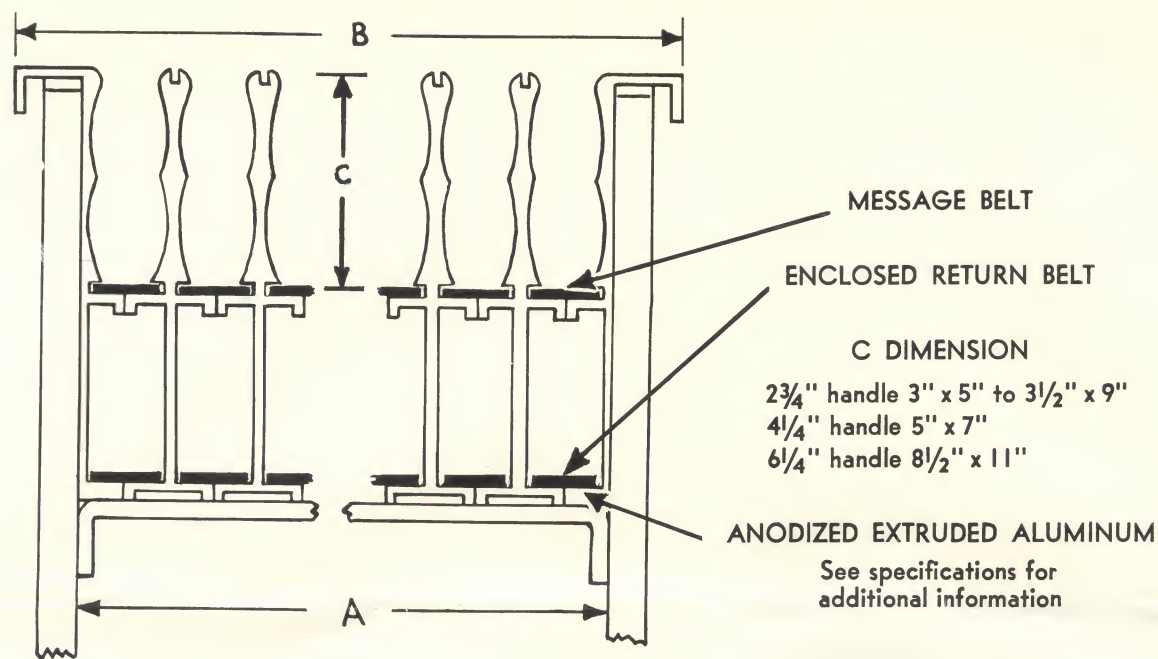

*Multilane gives you Power-Drive at the corners. No chance of papers slipping as in friction models.*

Front cut-away shows Multilane's rugged I-Beam construction. Note the unique 3-point contact channels. This feature reduces the area of contact between document and channel—a true friction eliminator.

## OVERHEAD INSTALLATION

NO. LANES	A DIM. BETWEEN STANDS	B OVER ALL OUTSIDE DIM.	NO. LANES	A DIM. BETWEEN STANDS	B OVER ALL OUTSIDE DIM.
